SA2-3.6	Behavioral pattern and SVO	36
SA2-3.7	Behavioral pattern and gender	38
SA2-4	Game results and predictors	40
SA2-4.1	Technical note	40
SA2-4.2	Predictors identified in Study 1	42
SA2-4.3	Exploratory analysis	42
SA2-4.4	HEXACO-scales	42
SA2-4.5	Other personality scales	43
SA2-4.6	Cognitive variables	45
SA2-4.7	Economic games	45
SA2-4.8	Political measures	47
SA2-4.9	Categorical variables	48
SA2-4.9.1	Demographics	49
SA2-4.9.2	Religion and politics	53
SA2-5	Game behavior and postquestionnaire	56
SA2-5.1	Motivation	56
SA2-5.2	Motivation and risk preference	59
SA2-5.3	Motivation and SVO	62
SA2-5.4	Motivation and CRT	63
SA2-5.5	Specific postquestionnaires and game behavior	65
SA2-5.6	Expectation Purple	67
SA2-5.6.1	Percent H-choices	76
SA2-6	Exploratory Analyses	85
SA2-6.1	COVID-19 related scales and predictor variables	85
SA2-6.2	COVID-19 related scales and HEXACO-scales	86
SA2-6.3	COVID-19 related scales and politics	86
SA2-6.4	COVID-19 testing and game results	95

List of Figures

SA2-1	Transmission Game results distribution	23
SA2-2	Transmission Game roundwise results	25
SA2-3	Game results across conditions: Jittered points within the box-plots represent individual results, p-values of selected comparisons are shown.	27
SA2-4	Experimental conditions and distribution of percentage of risky choices	29
SA2-5	Experimental conditions and behavioral patterns	33
SA2-6	Behavioral pattern and risk preference	36
SA2-7	Behavioral pattern and CRT	37
SA2-8	Behavioral pattern and SVO	39
SA2-9	Behavioral pattern and gender	40
SA2-10	Game and HEXACO-scales	43
SA2-11	Game and personality	44

SA2-12	Game and CRT	46
SA2-13	Game and SVO	47
SA2-14	Game and politics	49
SA2-15	Gender and game scores	51
SA2-16	Education and game scores	52
SA2-17	HH income and game scores	53
SA2-18	Religion and game scores	55
SA2-19	Political party and game scores	56
SA2-20	Game and Poastquestionnaire (part 1)	58
SA2-21	Game and Poastquestionnaire (part 2)	60
SA2-22	Motivation and risk preference	61
SA2-23	Motivation and SVO	63
SA2-24	Motivation and CRT	65
SA2-25	Reactions to interventions and game scores	67
SA2-26	Postquestionnaire expectation percent purple	69
SA2-27	Postquestionnaire expectation percent purple	72
SA2-28	Postquestionnaire expectation percent H-choices	78
SA2-29	Postquestionnaire expectation percent H-choices	80
SA2-30	COVID-19 related scales and predictors	88
SA2-31	COVID-19 related scales and HEXACO scales	89
SA2-32	COVID-19 related scales and politics	90
SA2-33	Conservatism and Compliance	92
SA2-34	Preference for Trump and Compliance	92
SA2-35	Preference for Biden and Compliance	93
SA2-36	Conservatism and Tradeoffs	93
SA2-37	Preference for Trump and Tradeoffs	94
SA2-38	Conservatism and Worries	94
SA2-39	COVID-19 testing and game results	96

SA2-1 Data preparation

SA2-1.1 Packages and dataset

This document was prepared in Overleaf, as an Rtex file implementing knitr. Any output is generated by R during compilation, and can thus be replicated by entering the same commands referencing the same dataset. Overleaf’s R version and selection and versions of packages are not under the user’s control. This section demonstrates the R version and the list of packages used for calculations and output generation. <https://cran.r-project.org/web/packages/psych/psych.pdf>

SA2-2 Exclusion of participants and sample selection

The task page was accessed 897 times in total. Only 659 participants entered the study, and 238 participants did not: 26 participants were flagged due to a suspicious IP-address (possible proxy-use, VPN server, or compromised server). The IP-checkers disagreed only in one of these cases. 20 participants did not submit their attention check responses, 185 participants failed at least one of the two checks in the beginning and did not enter the study, either. Two participants were not located in the United States, but in Portugal, four did not give a valid answer to the question about their state abbreviation (typical false answers were "United States of America" or "COVID-19"). One participant did not give consent and left the study.

Of those participants who started, 25 participants stopped in the general game instructions, 4 stopped their participation during the simulator instructions, and 3 stopped after the transmission game but before the end of the survey. 21 participants committed too many errors in the attention checks (at least 25) and were automatically prevented from further participation (and asked to return the task). The distribution of comprehension errors is shown in Table SA2-1.

A further 4 participants were identified to have completed part of the survey twice (e.g., they stopped their first attempt and reloaded the survey and restarted it later). Even if the second attempt might have been complete, these participants were excluded from the study. One participant was identified to need the highest amount of time to finish the survey and give inconsistent or incomprehensible responses throughout the task (e.g., espousing extremely liberal and conservative positions simultaneously). These problems were identified during the study and these places were filled by later participants. Finally, the randomization algorithm started one participant in the wrong condition at the very end of the study. We collected one additional participant in the correct condition and excluded the additional data point from the analysis (this was decided before the participant had completed the task and followed the pre-registered protocol).

SA2-4 Game results and predictors

SA2-4.1 Technical note

The following commands make use of the package "GGally", which is not part of Overleaf's R installation. Thus, instead of running the commands during compilation, we present the listing and include the images produced at an earlier point in time. Using the commands in R-Studio should lead to the same results (pace version differences).

For all diagrams, the following code snippet needs to have run at least once:

```

1 library("GGally")
2 cond=df$conditionShortName
3 levels(cond) <- list(CON="Control", CHN="Chain", DES="Descriptive",
4                     INJ="Injunctive", SIM="Simulator", VIC="Vicarious")

```

All products of the "ggpairs" command (always named "p") are post-processed with the following code snippet.

```

1 for(i in 1:p$nrow) {
2   for(j in 1:p$ncol){
3     if((j>1)&(i==1)){
4       p[i,j] <- p[i,j] +
5         theme(panel.background = element_rect(fill = "black",
6           colour = "darkgray",
7             size = 2, linetype = "solid"))+
8         scale_fill_manual(values = c("#FDE725FF", "#B8DE29FF",
9           "#56C667FF", "#1F968BFF", "#287D8EFF", "
10          #39558CFF")) +
11        scale_color_manual(values = c("#FDE725FF", "#B8DE29FF",
12          "#56C667FF", "#1F968BFF", "#287D8EFF", "
13          #39558CFF"))
14      } else if((j>1)&(i>1)&(j>i)){
15        p[i,j] <- p[i,j] + theme_void() +
16          scale_fill_manual(values = c("#FDE725FF", "#B8DE29FF",
17            "#56C667FF", "#1F968BFF", "#287D8EFF", "

SA2-5 Game behavior and postquestionnaire

SA2-5.1 Motivation

Eleven questions were answered on a scale from 1–5: Strongly disagree—Disagree—Neither agree nor disagree—Agree—Strongly agree.

- **Post01:** I wanted to make as much bonus money as possible.
- **Post02:** I wanted to make more bonus money than other players.
- **Post03:** I felt responsible for other players.
- **Post04:** I wanted to make other players switch color.
- **Post05:** I was afraid to switch color in this game.
- **Post06:** I tried to anticipate what others were doing in this game.
- **Post07:** I followed my gut in this game.

- **Post08:** I wanted to take some risk in this game.
- **Post09:** I wanted to protect others in this game.¹
- **Post10:** I did not care at all what happened in this game.
- **Post11:** I wanted that the entire group receives as much money as possible.

The items were split in two parts and correlated with the game score below—again visualized using the GGally-library.

```

SA2-5.5 Specific postquestionnaires and game behavior

All postquestionnaires in the five intervention conditions shared the same structure. Dropping the additional question for the simulator condition (highly correlated with the "understood" item and unique to one condition), all condition-specific variables are joined in single variables and correlated with the game scores.
